WEATHER SYNOPSIS BY REGION

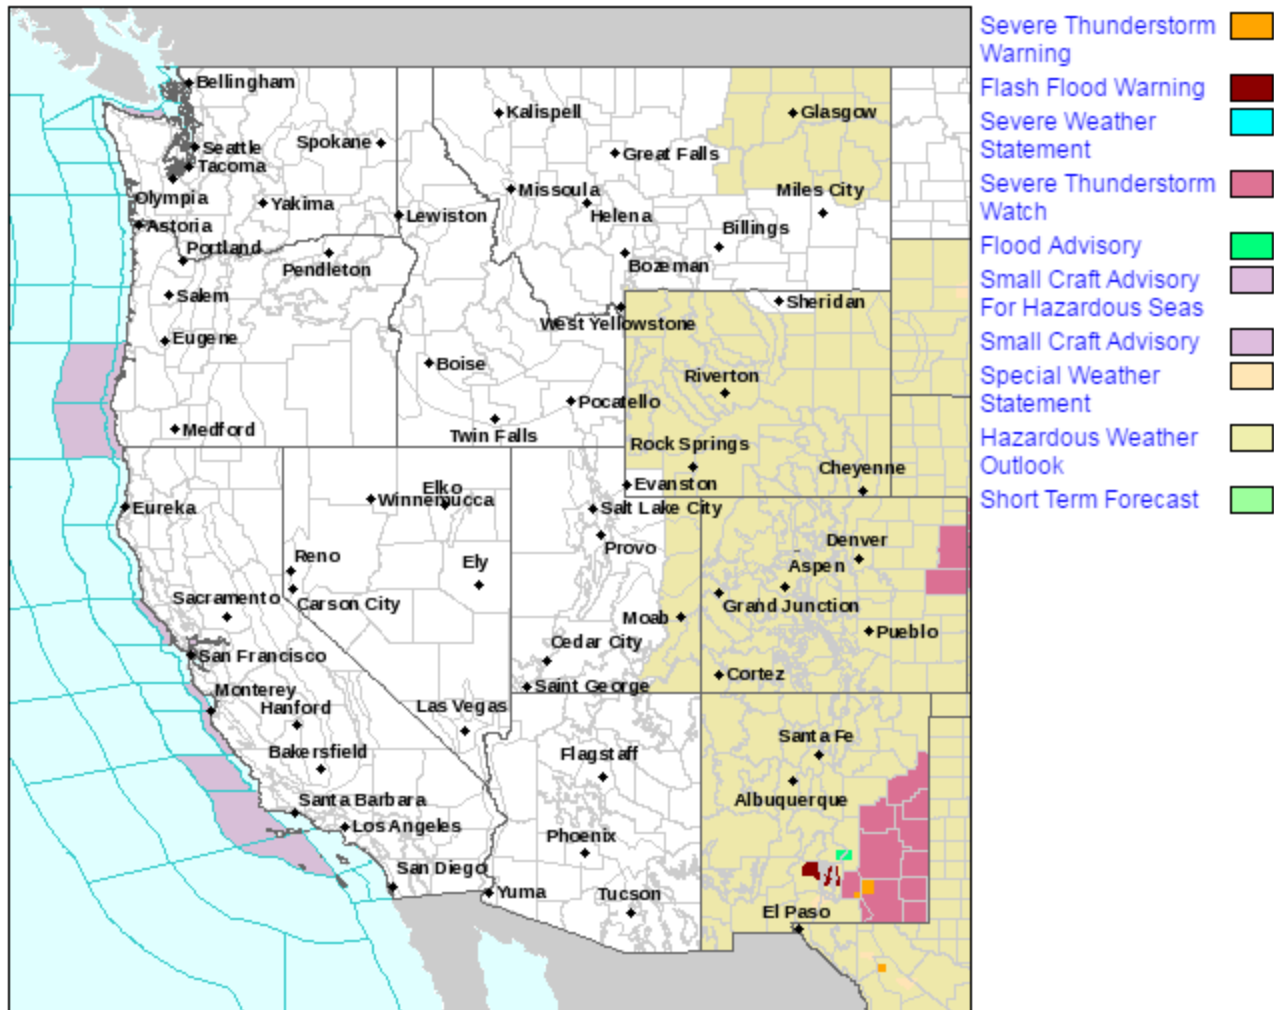

NORTHERN CALIFORNIA

A Pacific high pressure ridge will build over the region through midday Saturday, then shift to Central California. A warming trend will bring temperatures a bit above normal today and about 7-10 degrees above normal Friday and Saturday. Gusty north-northeast/offshore downslope surface winds are expected today through early Sunday, with very low relative humidity (RH) and poor overnight RH recovery from the western Sierra slopes to the coast. Peak gusts will be 20-25 mph in the northern Sacramento Valley and surrounding foothills Friday morning. The ridge will move to Central California by late Saturday as a Pacific frontal system approaches the North Coast. Southwest to west winds and high clouds will increase over the higher terrain in the north. With a flat high pressure ridge to our south on Sunday a general westerly flow will prevail. Temperatures will drop a few degrees from Saturday and a stronger onshore push will develop in the afternoon. Skies will be partly cloudy in the south and mostly cloudy in the north as a weak front stalls near the Oregon-California state line, with a few light rain showers possible in the far north. Monday will be a little drier and sunnier as a low pressure trough deepens offshore. Southwest winds will increase over the higher terrain and east of the Cascade-Sierra crest, with gusts reaching 25-30 mph there in the afternoon. On Tuesday another weak front will move over the area with more clouds and wind, and it will bring cooler temperatures. There is a chance of light rain showers in the far north again. Dry north to northeast/offshore winds are expected to develop Wednesday once the frontal system moves off to the east, and continue into next weekend.

SOUTHERN CALIFORNIA

A weak Pacific trough over California will bring a little below normal temperatures to the region through Friday, with 70s to low 80s across the mountains and 80s to low 90s in the valleys. Minimum humidity will be mainly between 12% and 25% away from the coast through Friday. The southern part of the trough will cut off from the main flow and form a weak low off the Northern Baja Coast as strong high pressure builds into California from the Pacific this weekend. This will cause light offshore flow, well above normal temperatures, and minimum humidity to drop into the single digits and teens. The weak low will move northward to off the Southern California Coast bringing isolated showers and thunderstorms to Southern California Monday. Temperatures will cool a few degrees Monday, but will remain well above normal. A trough will drop down the West Coast which will bring significant cooling and an increase in humidity to the region Tuesday and Wednesday. This trough will also bring gusty westerly winds to the mountain ridges and desert passes Tuesday and Wednesday.
